

Your BIM capability, on demand.

Governed BIM, specialist teams and Digital Twin-ready information for complex programmes across Portugal and Europe.

01

Advisory & assurance

Requirements, strategy, audit, governance and independent information assurance.

02

Information management

Controlled exchanges, CDE workflows and ISO 19650-aligned delivery.

03

Delivery capacity

Specialists and managed teams mobilised around programme demand.

04

Digital Twin readiness

Reliable asset information structured for operational connection and lifecycle use.

From requirement to controlled delivery

01

Frame

Define outcomes, information obligations, scope boundaries and acceptance criteria.

02

Architect

Set governance, delivery plan, responsibilities, systems and assurance gates.

03

Mobilise

Deploy named roles and production capacity against an agreed mobilisation plan.

04

Control

Report quality, issues, decisions, dependencies and handover readiness.

What procurement teams can contract

01

Governance

BIM strategy, EIR/AIR support, BEP review, responsibility matrix, CDE workflow.

02

Assurance

Model audit, compliance matrix, issue register, acceptance evidence and executive findings.

03

Coordination

Federation protocol, clash/issue workflow, coordination reports and decision records.

04

Production

Discipline models, drawings, schedules, model health records and controlled exchanges.

05

Asset information

Classification, attribute schema, validation rules, handover dataset and readiness roadmap.

06

Talent

Role specification, mobilisation plan, named accountability and performance cadence.

Structure the right engagement

Share the programme stage, disciplines, information requirements, schedule, systems and procurement route. BIM Tech will frame a suitable scope and commercial model.

01

Discovery call

Confirm objectives, constraints, stakeholders and tender timetable.

02

Capability response

Receive a proposed team, methodology, deliverables, assumptions and commercial basis.
